MediaNet

iNeed Asset Name

UA-MEDIANET

What it does

Manages live video streaming from UN mission cameras.

Data flow:

1. Connects to **OpsData** to get info about cameras configured in missions
2. Cameras appear in **UA Maps** — clicking a camera triggers MediaNet
3. MediaNet connects to the mission-side server and streams live video back to UA Maps
4. Users watch live mission camera feeds through UA Maps

Integration points

- **OpsData** → camera configuration data
- **UA Maps** → camera display + streaming trigger
- **Mission servers** → source of the live video stream

Servers

- mnet-p-api-01 (PROD)

Active Tasks

- Clarify STATUS OK / Figure 7 description ambiguity (Giuseppe Ricco)
- Application section empty in SCOM (Giuseppe Ricco)
- Reply to Valeria Matveeva re MIN-MNAPP-53 on UA MediaNet dashboard
